

DevOps

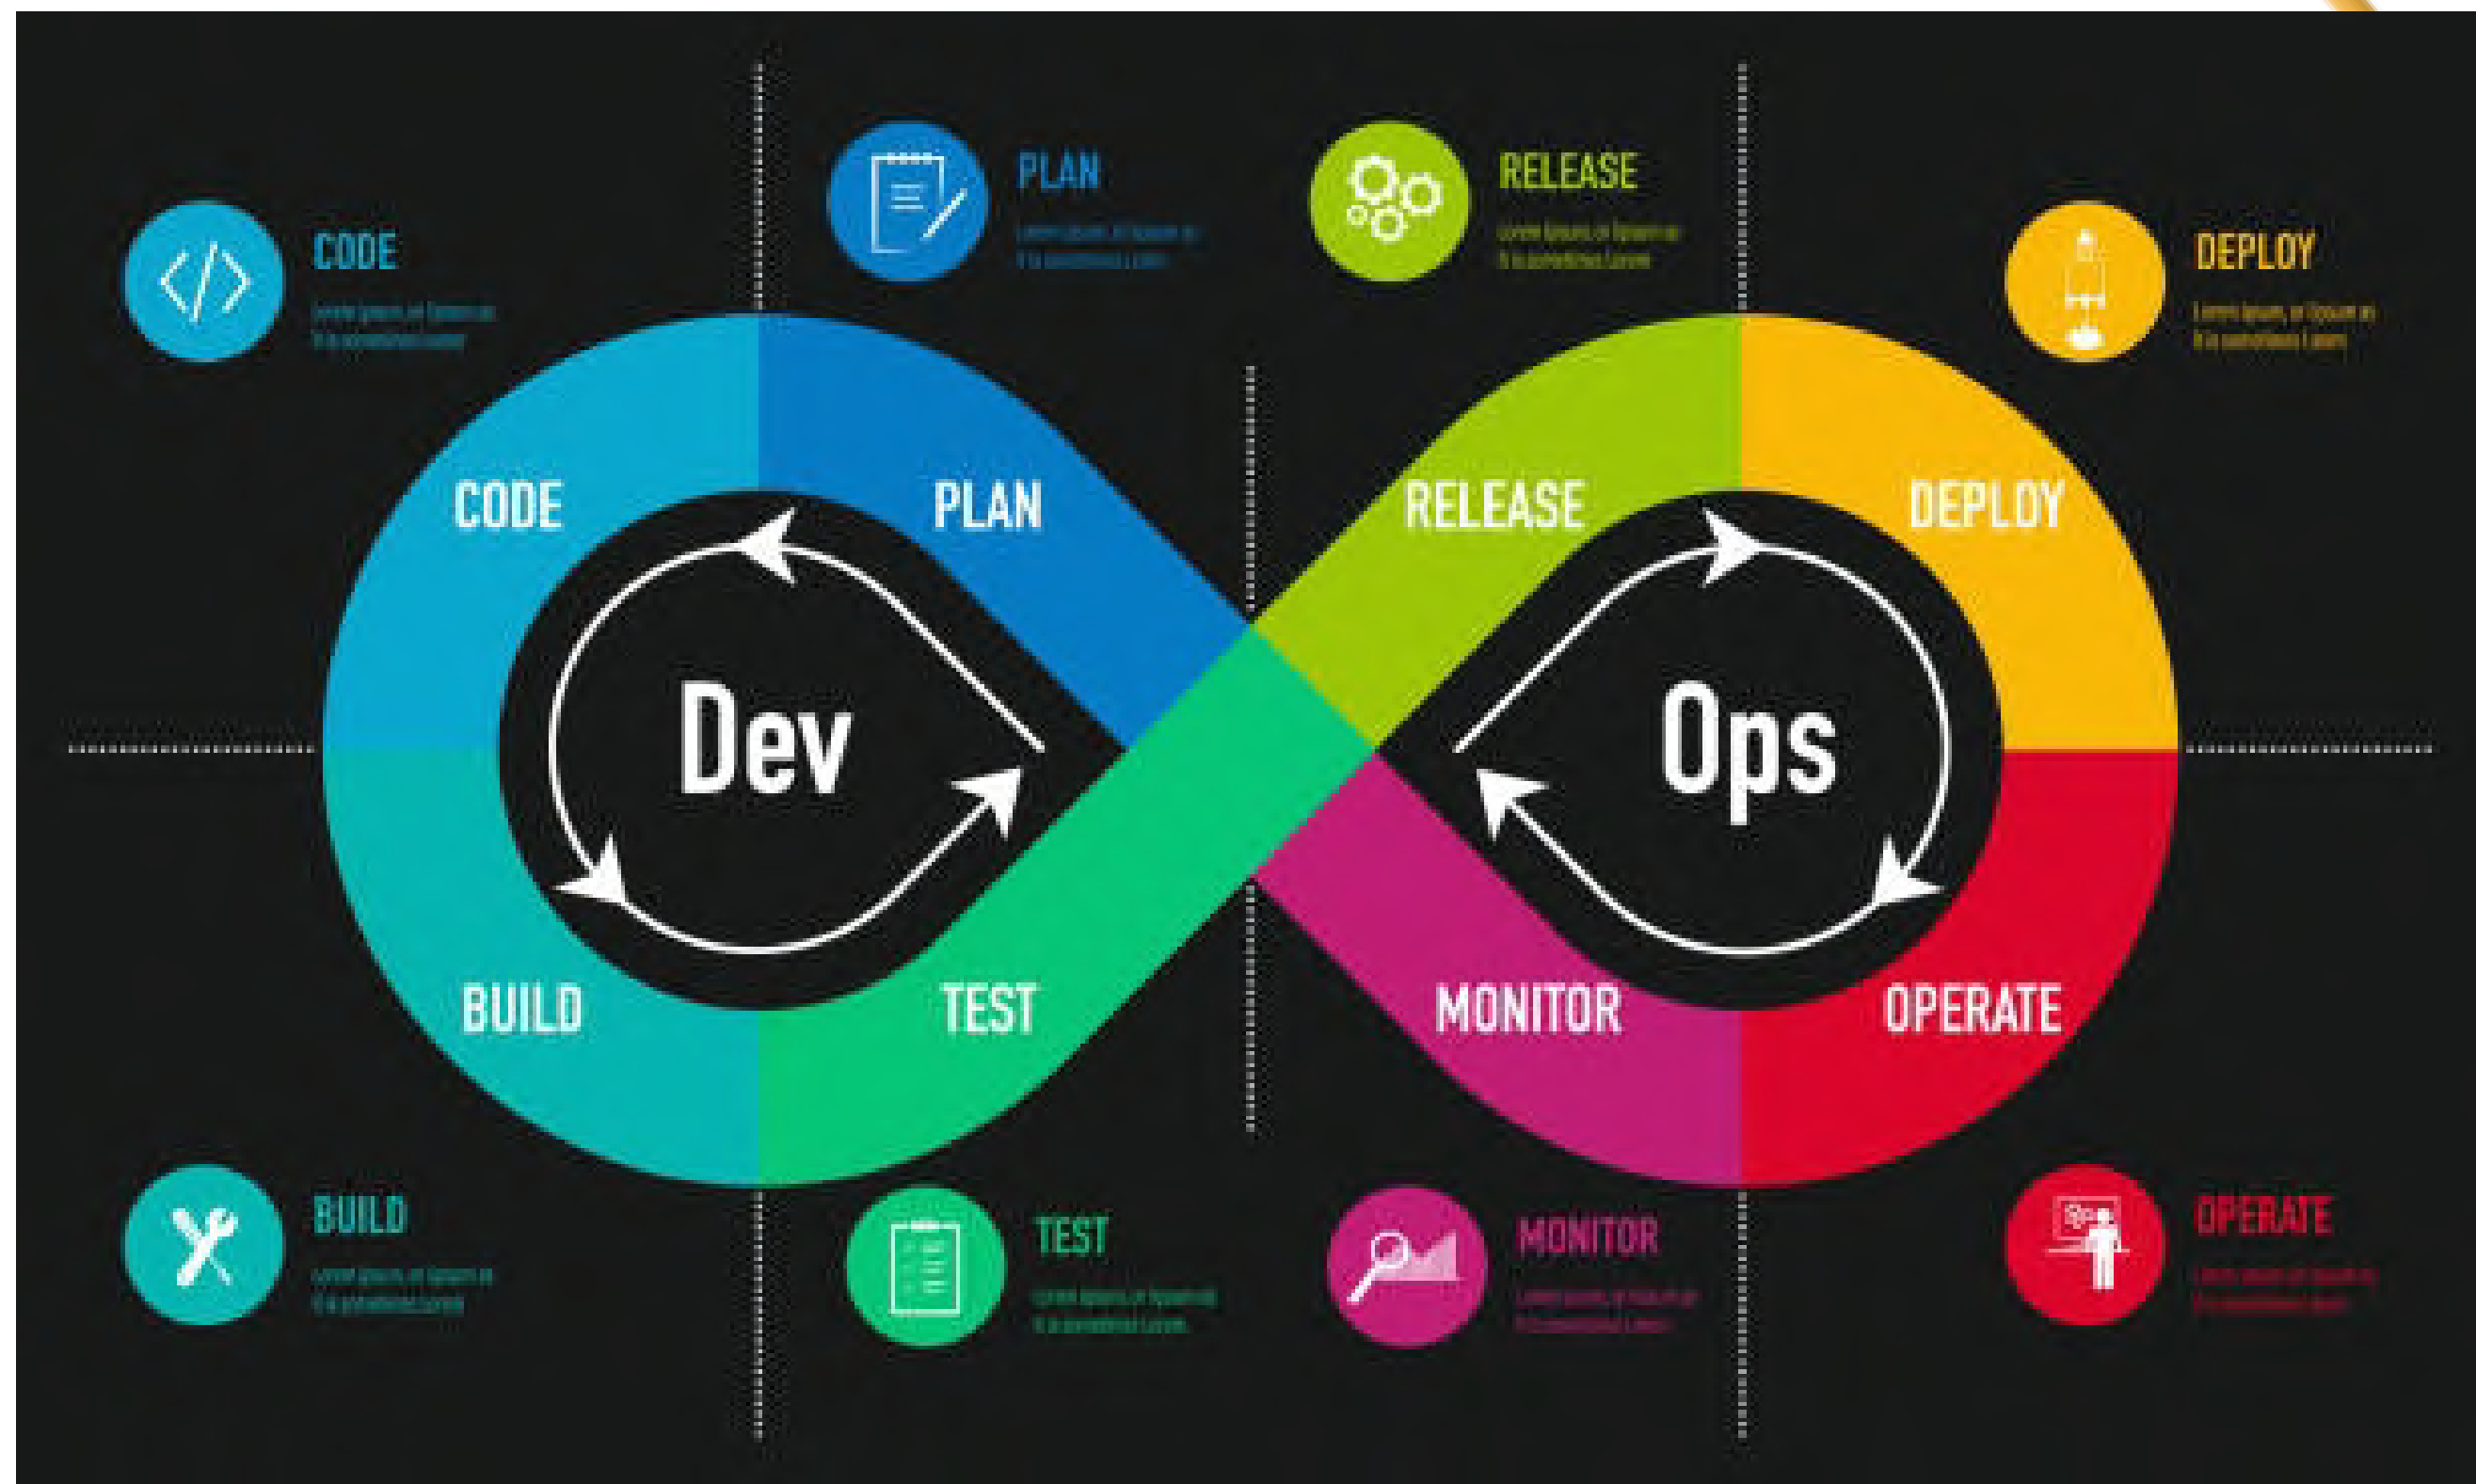

PROPOSAL DECK

What is DevOps

Introduction

DevOps (Development and Operations) is software methodology that tends to highly amplify communication, integration and collaboration between Software Developers and IT operations professional

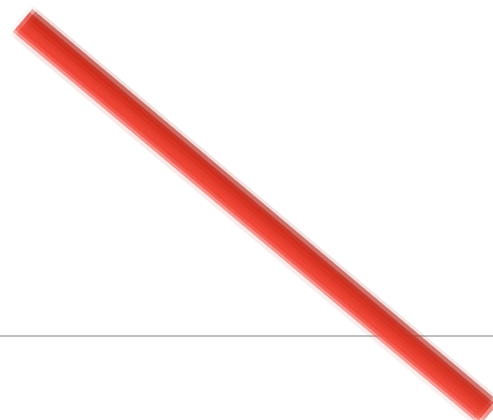

Benefit of adoption of DevOps

Benefits

Adopting DevOps principles is going to have a huge positive impact on the company.

In the next slides I will be stating them.

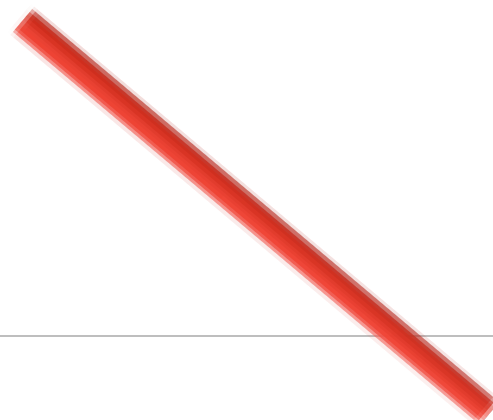

THE BENEFITS

Benefits

The DevOps model will increase the rate at which products are delivered. This will enable the product/company adopt to changing markets better.

Speed

Innovation

Benefit

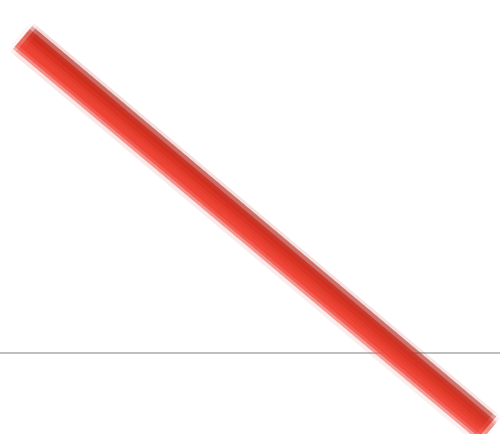

With the process being automated, developers will now have ample time to try out new things which will lead to product innovations.

Benefits

With this model we can push out more features faster and give customers and clients more satisfaction. We become more customer centred and consequently gain customer trust

Better Customer Satisfaction

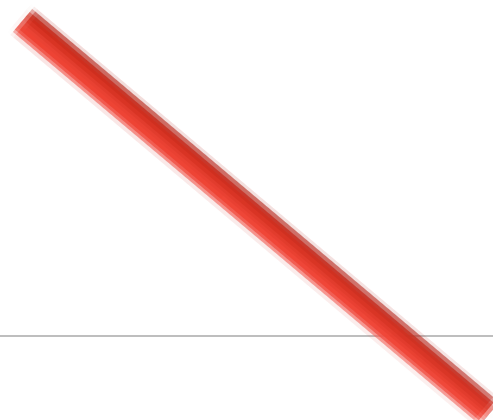

Better collaboration

Benefit

DevOps would also improve office space collaboration and communication.

This will ultimately lead to better working morale by the employees.

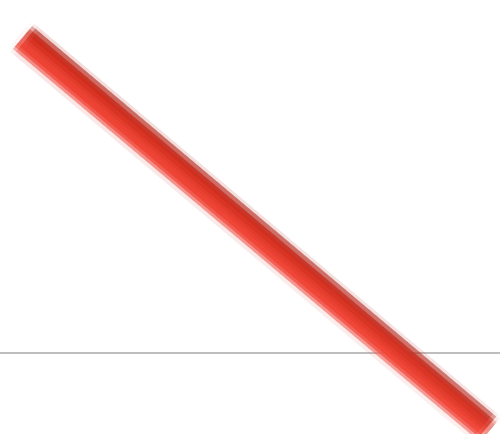

Benefits

When we have better communication in the office, employees who are happy, better innovative products and happy customers, the only consequence of that is more sales which means more revenue for the company.

Increased revenue

THANK YOU
